Revision History

Version Number	Revision Date	Summary of Changes	Modified by

[Note: It is recommended that drafts be numbered 0.1 to 0.9, and that the first approved version be numbered 1.0. Thereafter, new version numbers will depend upon changes: 1.01, 1.1, etc for minor updates, 2.0, 3.0 etc for major changes.]

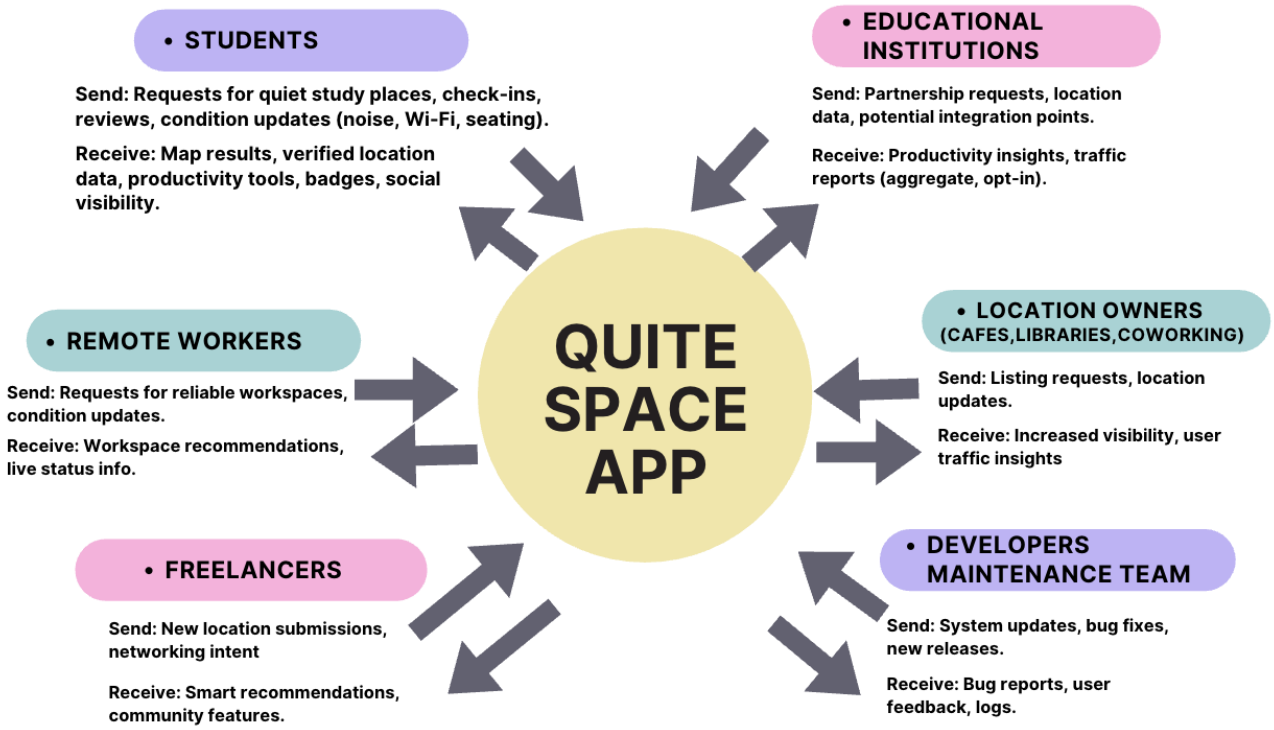
TABLE OF CONTENTS

1. BUSINESS CONTEXT DIAGRAM 4

2. REQUIREMENTS SCOPE STATEMENTS 6

3. HIGH LEVEL BUSINESS REQUIREMENTS SIGN-OFF 7

1. Business Context Diagram



Requirement Scope Area	Description
Interactive Map	A map-based interface for location discovery. The mobile app displays community-shared quiet study/work spots on an interactive map, with each location pin showing details like noise level, Wi-Fi quality, seating availability, and power outlets. This allows users to quickly see and select suitable nearby locations contributed by others.
Check-In & Feedback System	Real-time features for users to update and view current location conditions. Users can “check in” at a location to report the present noise level, Wi-Fi speed, seat availability, etc., via simple sliders/toggles. They can also rate and review locations, providing community feedback that keeps information accurate and up-to-date.
Gamification	Use of game-like elements to drive engagement. QuietSpace includes a badge reward system that recognizes user contributions (such as adding locations or regular check-ins) with digital badges. This gamified approach motivates users to participate actively and fosters a sense of achievement and competition.
Social Connectivity	Basic social features that enable community building among users. For example, QuietSpace offers friend visibility or the ability to see who else is using a location, allowing users to optionally connect and plan study sessions together. These social tools encourage collaboration and help create a supportive network of students and remote workers.

Productivity Tools	Built-in features to help users maintain focus and productivity. A key tool is the **Pomodoro timer**, which lets users work in timed intervals with breaks (a proven time-management technique). By integrating such tools (e.g. a Pomodoro timer linked with check-ins or session tracking), the app not only helps users find quiet spaces but also assists them in using those spaces effectively for studying or working.

External Entity	Description
Students	Primary end-users (including college and high school students) who need quiet places to study. They actively contribute to the platform by submitting location data, checking in with current conditions, and providing feedback on study spots.
Remote Workers	Professionals working outside traditional offices who seek reliable workspaces with good internet and low noise. They use QuietSpace to find suitable locations and report workspace conditions.
Freelancers	Independent workers looking for productive environments and networking opportunities. They find and share quiet work locations, and use the app to build professional connections.
Educational Institutions	Schools, colleges, and universities that serve as potential partners. They provide a community of student users and may supply location data or integration opportunities (e.g. campus libraries), supporting the app's adoption.
Location Owners	Owners or managers of quiet spaces such as cafés, libraries, or coworking spaces. They are external stakeholders who benefit from increased foot traffic and community engagement when their locations are listed and positively reviewed on QuietSpace.

Information Flows	Description
Location Data Submission	Users submit new location information to QuietSpace, including details like venue name, noise level, Wi-Fi quality, seating capacity, and outlet availability. This information flows from the user to the QuietSpace database, expanding the community-driven map with up-to-date locations.
Condition Updates	Real-time updates on location conditions flow from users to the system. When conditions change (e.g., a location becomes noisy or crowded), users report the noise, Wi-Fi, and seating status. This data is aggregated and made available to others, ensuring the map reflects current conditions
User Check-In Reports	When a user arrives at a location, they perform a check-in which is sent to the system. The check-in report includes the user's presence and the real-time condition data for that spot. These check-in records flow into QuietSpace to inform other users which locations are actively being used and how they currently fare in terms of study/work environment quality.
Badge Rewards	Reward notifications flow from the system to the user. As users contribute (by adding locations, providing updates, or consistent usage), QuietSpace issues digital badges or similar rewards. This information flow is the system recognizing user achievements – for example, a badge earned is displayed on the user's profile – encouraging ongoing engagement.

Information Flows	Description
Filter/Search Queries	Information flows from users to the system in the form of search and filter requests, and results flow back to the users. For instance, a user may query the app to **filter** locations by quietness, Wi-Fi strength, or recent updates. The system processes these criteria and returns a tailored list of locations or highlights on the map that match the query, enabling users to quickly find an optimal spot meeting their specific needs.

2. Requirements Scope Statements

Below are the high-level requirements (HLRs) for the QuietSpace mobile application, derived from the project vision and summary documents. Each requirement is tagged with a priority level indicating its importance: High (H), Medium (M), or Low (L).

HLR#	Description	Priority (H, M, L)
HLR01	Provide an **interactive map interface** that displays community-submitted quiet locations with key details (noise level, Wi-Fi quality, seating availability, etc.). This map must allow users to discover and view nearby study/work spots easily.	H
HLR02	Enable **user-contributed location submissions**, allowing users to add new study/work locations to the map. The system shall collect details for each new location, such as noise level, Wi-Fi speed, and outlet availability, to inform other users.	H
HLR03	Implement a **real-time check-in system** so that users can report current conditions at a location. Upon check-in, users will update noise, Wi-Fi, and seating conditions via the app, providing live data to others about the location's environment.	H
HLR04	Provide **user account and profile management** capabilities. Users must be able to create accounts and manage personal profiles, which will facilitate features like tracking contributions (locations added, reviews) and customizing preferences.	H
HLR05	Incorporate a **gamified badge system** to encourage engagement. Users will earn badges or similar rewards for contributing (e.g., adding locations, giving frequent updates) and reaching milestones, leveraging gamification to increase participation.	M
HLR06	Allow users to **save favorite locations** for quick access. The app should enable bookmarking or marking of preferred study/work spots so that users can easily find them later in a personalized list.	H
HLR07	Include **advanced filtering and search** functionality. Users should be able to filter and sort available locations by criteria such as quietest environment, highest-rated by the community, most recently updated, availability of outlets, etc.. This helps tailor the location results to individual needs.	H
HLR08	Integrate **productivity tools**, notably a built-in **Pomodoro timer** for focused work sessions. The timer will allow users to set work/break intervals and could be integrated with the app's check-in or notification system to support effective study habits	L
HLR09	Implement a **community rating and review system** for locations. Users shall be able to rate quiet places and write brief reviews or feedback. The system will aggregate these ratings to verify location quality and help maintain accurate, crowd-sourced information.	H

HLR10	Provide **basic social connectivity features**. QuietSpace should allow users to optionally connect with friends or see others nearby for collaborative study/work opportunities. This may include features like friend lists or the ability to share plans, fostering a sense of community.	L
HLR11	Provide **optional cosmetic customization** (e.g., themes, dark mode, or profile avatars).	L

3. High Level Business Requirements Sign-Off

The undersigned acknowledge their agreement with the contents of Version 1.0 of the High-Level *Requirements document for QuiteSpace*

Following approval of this document, requirements changes will be governed by the project's change management process, including impact analysis and appropriate reviews and approvals, under the general control of the Project Plan and according to company policy. Approved Change Request Documents, if present, will be attached to this Requirements Document as updates.

Name	Project Role and Functional Area	Date Signed
Daniil Orlov	Team Leader	Sept,28,2025
Baris Isci	Team Member	Sept,28,2025
Gozde Baran	Team Member	Sept,28,2025
Ibrahim Yondem	Team Member	Sept,28,2025
Nguyen Minh Triet Luu	Team Member	Sept,28,2025

** Note: physical signatures are not required. Email approvals are acceptable and should be appended to project documents.*
